

ILSA ANALYTICAL ISSUES

Eric A. Hanushek
Stanford University

Workshop Series on International Large-Scale Assessment (ILSA)
National Academy of Education
Washington, DC
June 2016

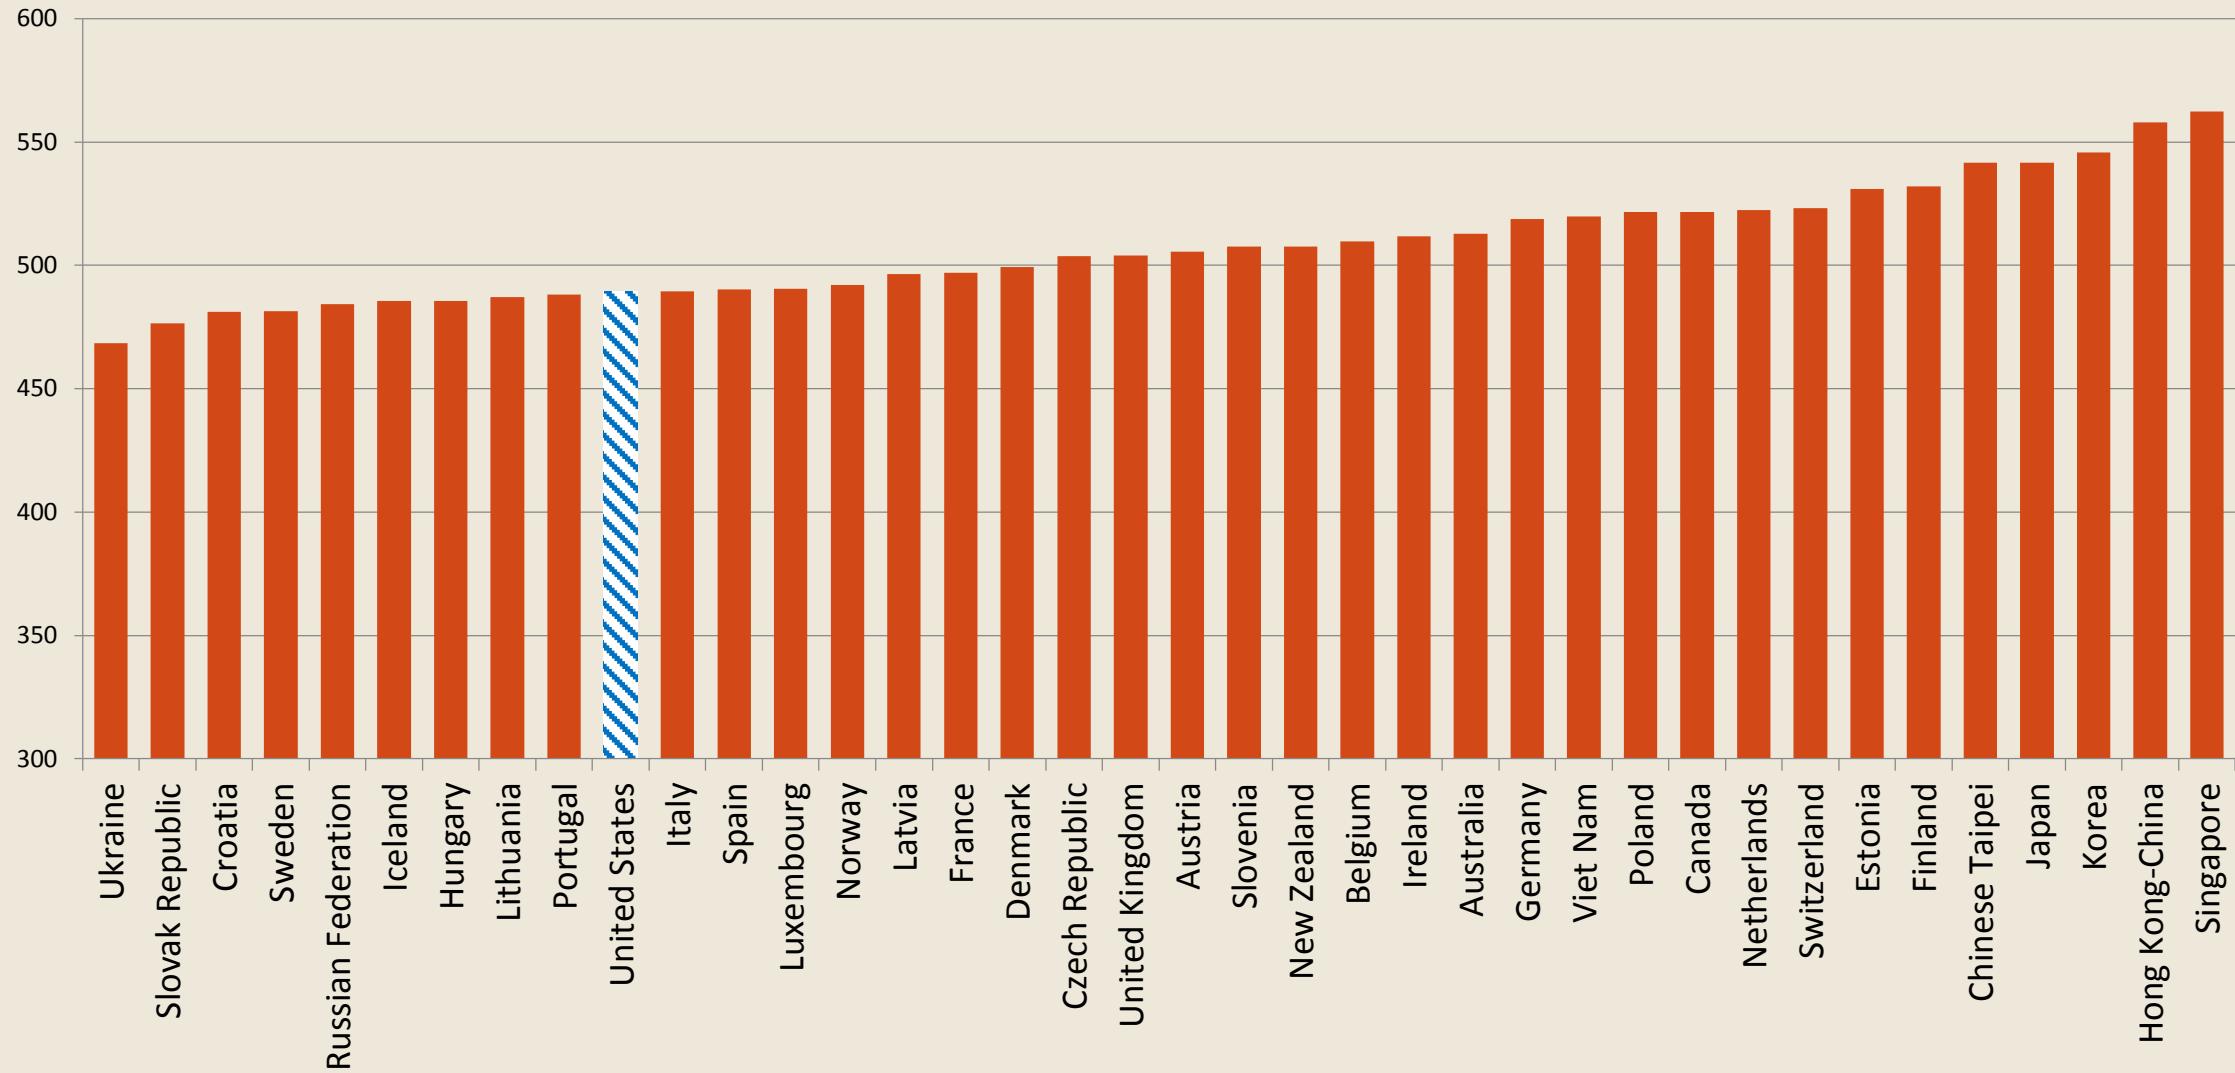

Overview of Comments

- Conditional on having ILSA, what can be done?
 - *Very useful reviews and analyses by Jan-Eric Guftafsson and Anna Katyn Chmielewski*
- Appeal of ILSAs
- Why not to use ILSAs
- Possible improvements

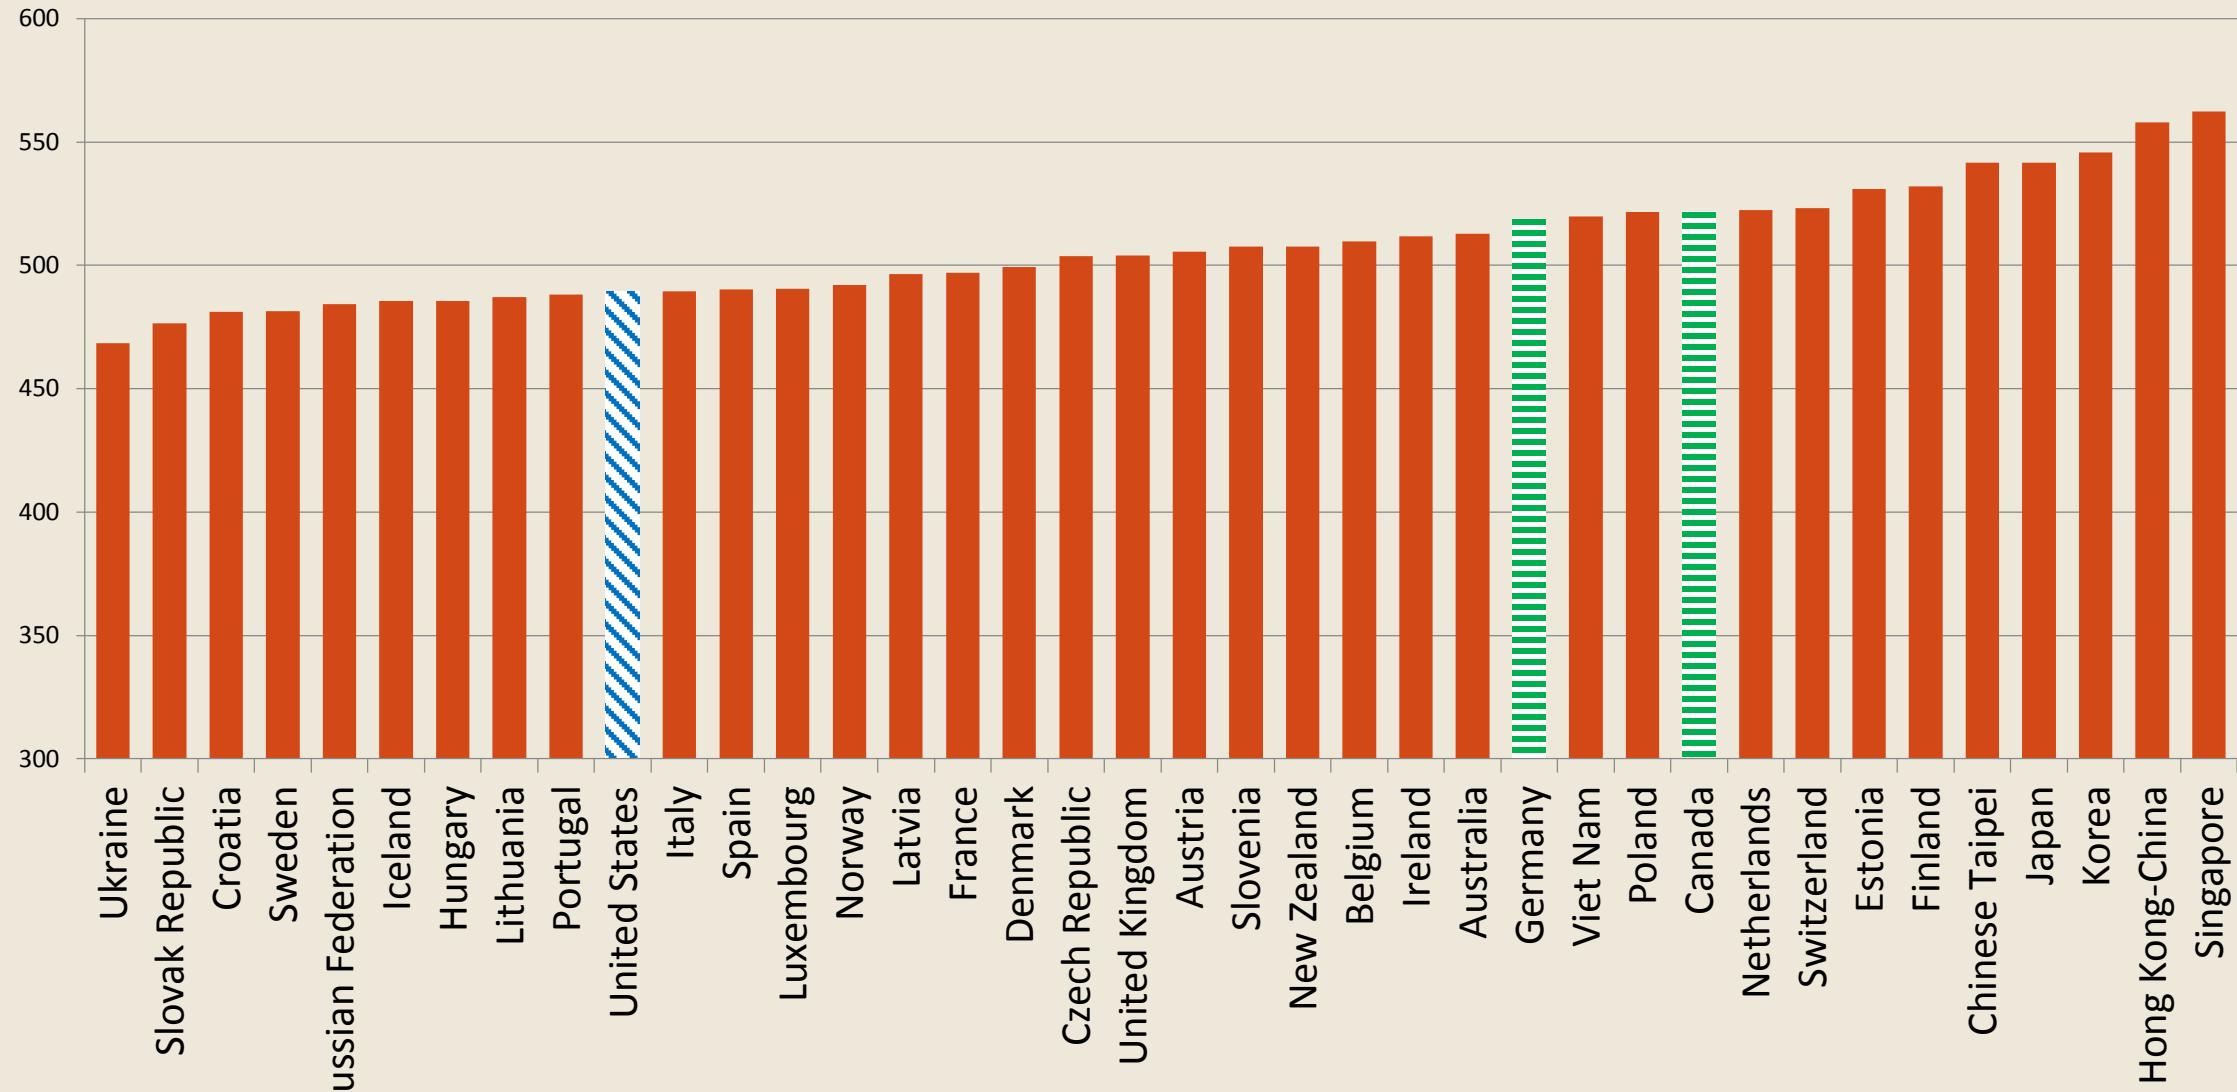

Appeal of ILSAs

- Identify what is possible
 - *Provides goals*
 - *Direct policy (MDGs, SDGs)*

Average Math+Science, PISA 2012

Average Math+Science, PISA 2012

UN Sustainable Development Goals

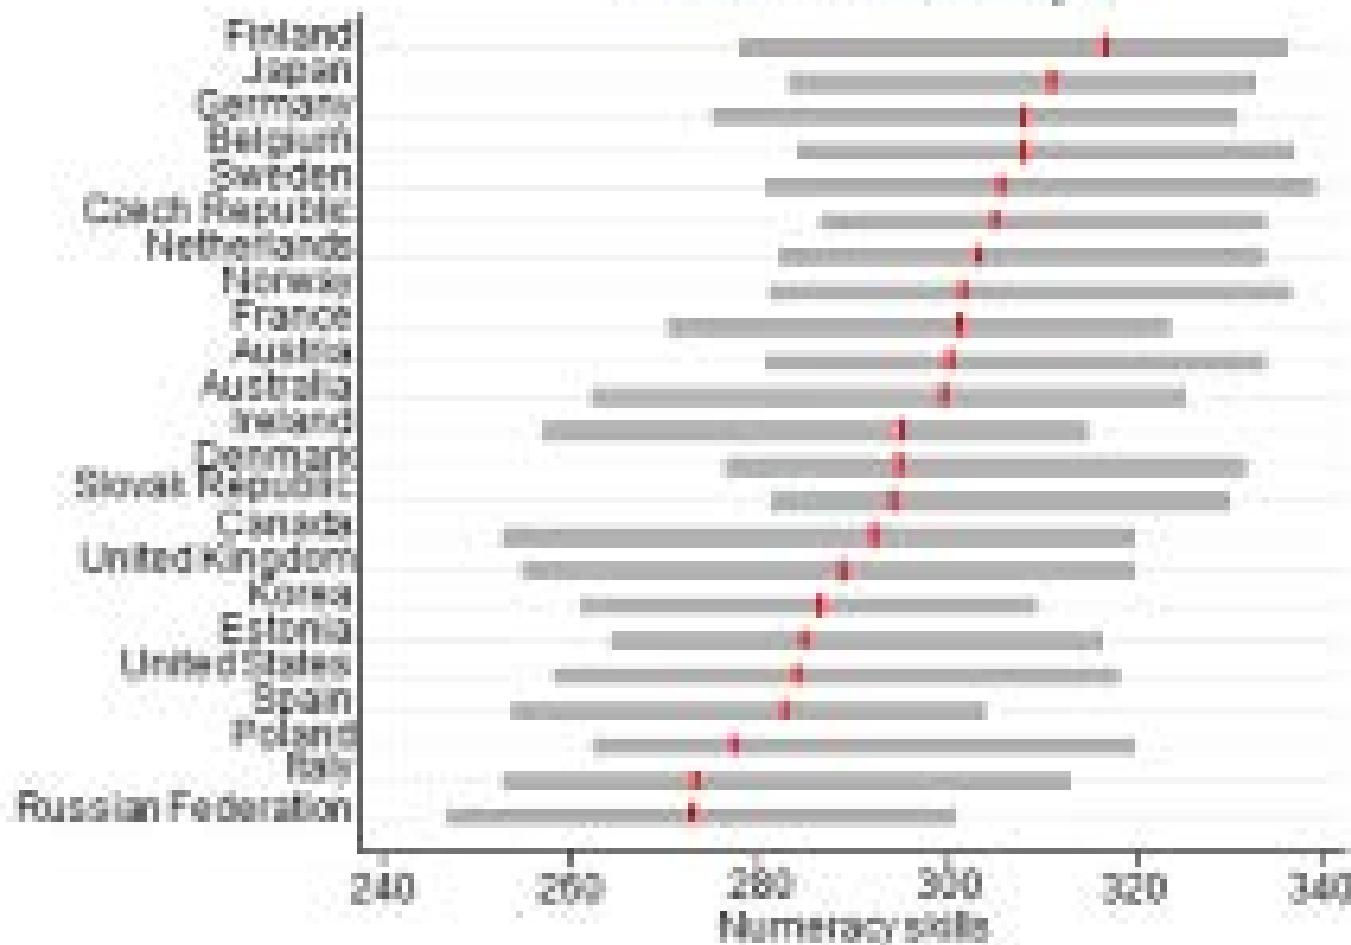

4 QUALITY EDUCATION

Appeal of ILSAs

- Identify what is possible
 - *Provides goals*
 - *Direct policy (MDGs, SDGs)*
- Understand effects of broad institutions
 - *General equilibrium impacts*
 - *Selection effects*
 - *Generalize from country results*
- Project impacts of improvement

Panel A. Numeracy

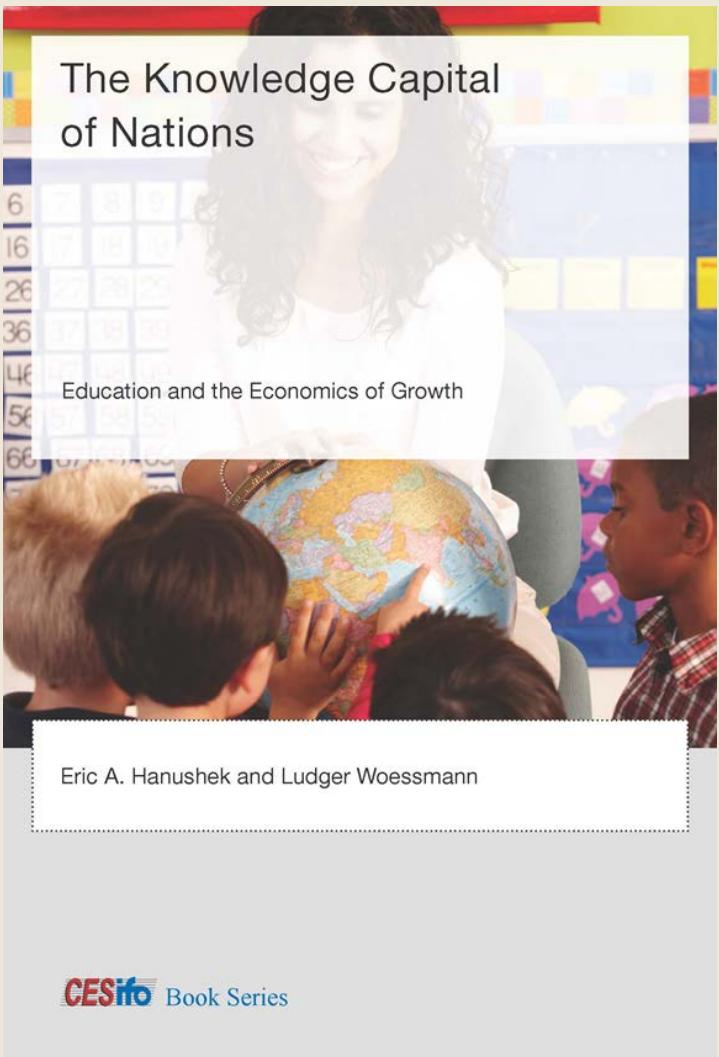

Teacher Skill Premia

Hanushek, Piopiunik and Wiederhold (2016)

Appeal of ILSAs

- Identify what is possible
 - *Provides goals*
 - *Direct policy (MDGs, SDGs)*
- Understand effects of broad institutions
 - *General equilibrium impacts*
 - *Selection effects*
 - *Generalize from country results*
- Project impacts (benefits) of improvement

Growth = Skills

Individual Returns to Skills (PIAAC)

Hanushek, Schwerdt, Wiederhold, and Woessmann (2015)

Why NOT to Use ILSAs

- Not good for much evaluation
- Within country
 - *Larger samples*
 - *Individual panel data*
 - *Cheaper*
- Often clearer causal analysis

Potential Improvements

- Keep constant measurement
 - *Country panels*
- Develop better external institutional data
- Consider individual panels
 - *Canada, Australia, Poland(?)*
- Link students in low income countries to world
